

Spring Boot

17/3/2026

- is a java framework built on top of spring which simplifies application development.
- It eliminates boilercode with autoconfiguration
→ boiler code :- you code again & again which doesnot solve main problem.
- It comes with an embedded server, making applications production ready out of box.
- It supports web apps, Rest APIs, micro services, security & seamless cloud deployment.

Features of spring

- Auto-configuration :- automatically configures components (like hibernate, JPA) based on dependencies. NO manual xml setup.
- Easy maintainance & creation of REST API :- annotations like @RestController, @GetMapping, @PostMapping, ?
- Embedded TOM cat server :-
 - NO manual setup. Ex: Jetty how ?
- Easy deployment :- Spring boot applications are packaged as JAR or WAR files and deployed directly to servers or cloud environments.

Applications

- Enterprise application :- Banking, Hospital
- cloud-native :- AWS, Azure
- real-time :- chat, stream applications
-
